

1204 – Weird Advertisement

Renat Mullakhanov (rem), one of the most talented programmers in the world, passed away on **March 11, 2011**. This is very sad news for all of us. His team went to **ACM ICPC World Finals - 2004**, placed **4th** and won **gold medals**. He really was a **great programmer**. May he rest in **peace**. This problem is dedicated to him.

2DPlaneLand is a land just like a huge **2D** plane. The range of **X** axis is **0** to **10^9** and the range of **Y** axis is also **0** to **10^9** . People built houses only in integer co-ordinates and there is exactly one house in each integer co-ordinate.

Now **UseAndSmile** Soap Company is launching a new soap. That's why they want to advertise this product as much as possible. So, they selected **n** persons for this task. Each person will be given a rectangular region. He will advertise the product to all the houses that lie in his region. Each rectangular region is identified by 4 integers **x_1, y_1, x_2 and y_2** . That means this person will advertise in all the houses whose **x** co-ordinate is between **x_1 and x_2** (inclusive) and **y** co-ordinate is between **y_1 and y_2** (inclusive).

Now after a while they realized that some houses are being advertised by more than one person. So, they want to find the number of houses that are advertised by at least **k** persons. Since you are one of the best programmers in the city; they asked you to solve this problem.

Input

Input starts with an integer **T** (≤ 13), denoting the number of test cases.

Each case starts with a line containing two integers **n** ($1 \leq n \leq 30000$), **k** ($1 \leq k \leq 10$). Each of the next **n** lines will contain four integers **x_1, y_1, x_2, y_2** ($0 \leq x_1, y_1, x_2, y_2 \leq 10^9, x_1 < x_2, y_1 < y_2$) denoting a rectangular region for a person.

Output

For each case, print the case number and the total number of houses that are advertised by at least **k** people.

Sample Input	Output for Sample Input
2 2 1 0 0 4 4 1 1 2 5 2 2 0 0 4 4 1 1 2 5	Case 1: 27 Case 2: 8

Note

Dataset is huge. Use faster i/o methods.
